Note : The commission is either counted in flat amount or in percentage, it cannot be both at the same time.

Note 2 : There is only one occurrence of the field "Commission" per OrderItem. Nevertheless, the commissions must be applied to each passenger by the partner. Thus, in case the commissions are applied in a flat amount, it has to be multiplied by the number of passengers to get the total commission. In case the commission is applied in percentage, it then must be applied to each passenger.

Table 55 OrderChangeRQ to pay for a pending order with cash

Use case 2: Cancellation of paid order - Void

Use case description

The OrderChangeRQ is sent to cancel a paid order.

Preconditions

The order contains an itinerary that is paid.

For the service section of the OrderViewRS:

/IATA_OrderViewRS/Response/Order/OrderItem/Service:

- It is encoded based on the PNR. However, for void/refund, the segments are deleted before the OrderViewRS.
- The data returned in this section will be hardcoded and so, not meaningful.

In the Request, the seller needs to put the OrderID and the OfferID he wants to delete. The OfferID is coming from the OrderReshop they did before doing an OrderChangeRQ.

Table 57 OrderViewRS to cancel a paid order – Void

Use case 3: Cancellation of a paid order - Refund

Use case description

The OrderChangeRQ is sent to cancel a paid order.

Preconditions

The order contains an itinerary that is paid.

For the service section of the OrderViewRS:

/IATA_OrderViewRS/Response/Order/OrderItem/Service:

- It is encoded based on the PNR. However, for void/refund, the segments are deleted before the OrderViewRS.
- The data returned in this section will be hardcoded and so, not meaningful.

In the Request, the seller needs to put the OrderID and the OfferID he wants to delete. The OfferID is coming from the OrderReshop he did before doing an OrderChangeRQ.

Use case 11: Update and pay the order with the OB Fees using Credit Card

Use case description

An offer is priced without any information regarding OB fees (or initially the client wanted to use a different **Credit Card**). Since the order is going to be paid using a **Credit Card** as FOP, an **OrderQuote** is necessary beforehand to recompute the **OB Fees** with the **CC** info to retrieve the new amount and the **OB Fees** value.

The **OrderChange** is used to update (adding the **OB Fees**) and paying the order.

Prerequisites

- The priced offer is returned without OB fees.
- The order is created without payment info (deferred payment).
- The OB Fees amount is computed using the OrderQuote transaction.

Table 73 Request

Use case 12: Update and pay the order removing the OB Fees

Use case description

An offer is priced with information regarding **OB Fees** (the client initially planned on paying by **Credit Card** for example) but hasn't been paid yet (deferred payment). The client now intends on paying using **CASH** or wants to use a different **Credit Card** as **FOP**, so an **OrderQuote** is necessary beforehand to recalculate and remove (if the new **Credit Card** doesn't have **OB Fees** associated to it) the **OB Fees** from the total amount to be paid.

The **OrderChange** is used to update ("removing" the **OB Fees**) and paying the order.

Prerequisites

- The priced offer is returned with **OB Fees**.
- The order is created without payment info (deferred payment).
- The OB Fees are removed using the **OrderQuote** transaction.
