1. Interface Overview

1.1. Short description

The OrderQuoteRQ API is used to reprice an offer (post order creation) or an existing unpaid order.

1.2. Current scope

- Pricing of ancillaries offers (seat or services) after the order creation.
- Repricing of an order (only for the unpaid air order item) when the price guarantee time limit is exceeded.
- Repricing of a reshop offer to change an existing paid order (after the OrderReshopRQ step).
 - A currency override is possible at this step.
- Repricing of a reshop offer to change an existing unpaid order (after the OrderReshopRQ step).
- Change/Cancel conditions and fare benefits are returned for the air offer.
- OB Fees reprice for an unpaid order.

1.3. Out of scope

- When repricing an unpaid order, the ancillaries order items of the order are not repriced. Only the air order item is repriced.
- FQTV and CLID can't be added in the OrderQuoteRQ.
- No ticketing time limit/offer expiration time is returned in the response.
- In case of discounts, the original amount and reason for discount info is not displayed.

1.4. Prerequisites

To use **OrderQuote 21.3 NDC**, the previous NDC transactions in the flow should have generated Order which can still be retrieved.

1.5. Supported flows

1.5.1. Use case: Price a seat offer

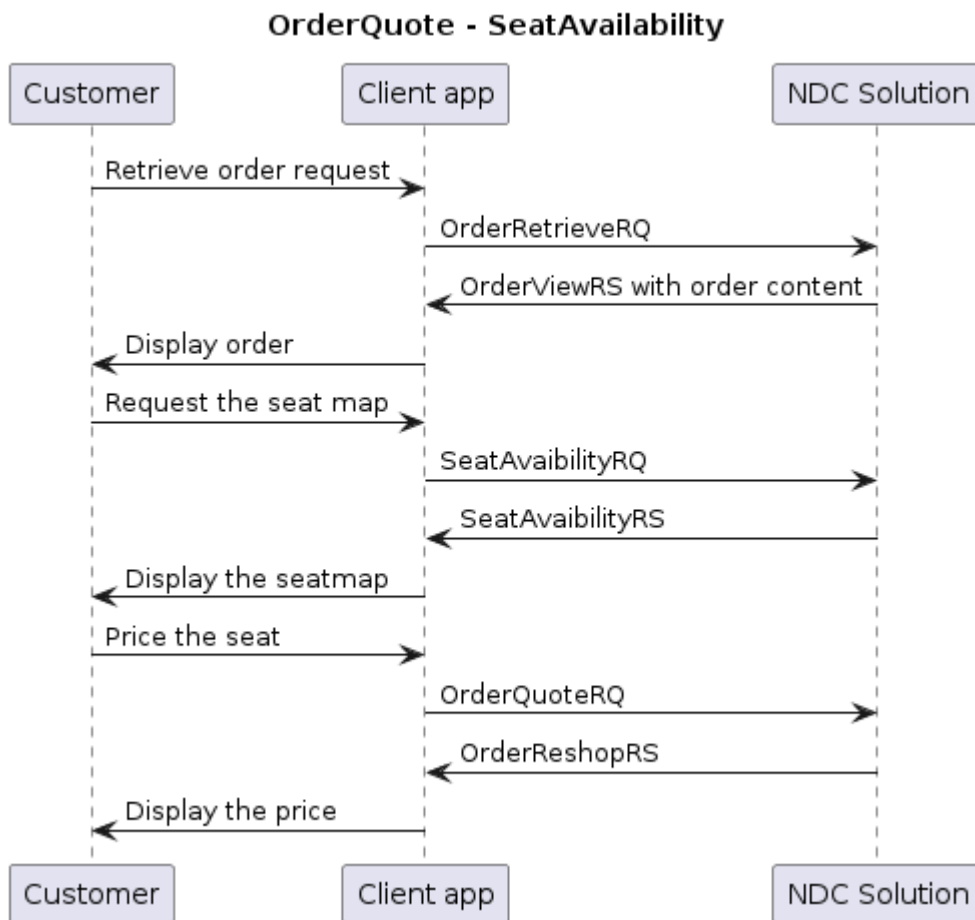

Conditions

OrderQuoteRQ is sent to price a seat offer.

Prerequisites

- An order has been created successfully with OrderCreate
- An OrderRetrieve has been run successfully on the order
- The SeatAvailability transaction has been run successfully and valid offers have been stored

Flow

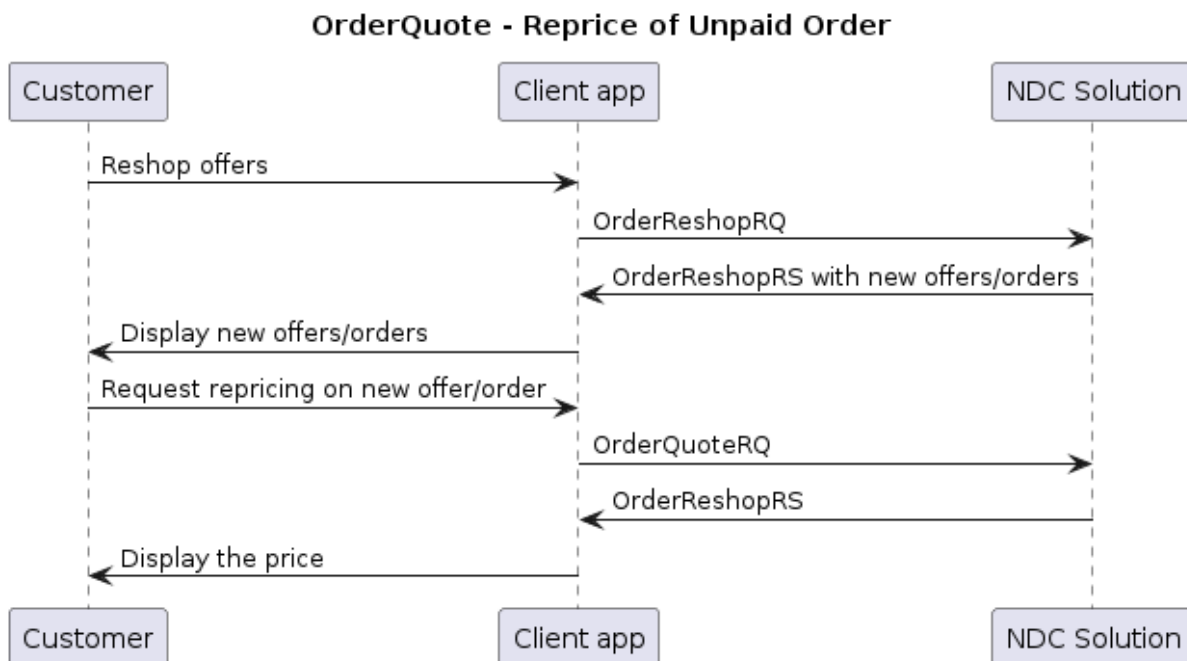

1.5.2. Use case: Change of unpaid order

Conditions

OrderQuoteRQ is sent to price an unpaid exchanged order/offer.

Prerequisites

- An order has been created successfully with OrderCreate without being paid
- An OrderRetrieve has been run successfully on the order
- The OrderReshop to exchange the order has been run successfully.
- The CC OB fee can be calculated in two manners:
 - By putting the FOP in the input
 - If the parameter USE_FOP_IN_CONTEXT_FOR_OFFER_REPRICING is set to true, the system will automatically retrieve the FOP used in prime booking to compute FOP OB fee if no FOP was provided in input.

1.5.3. Use case: Reprice an expired TST

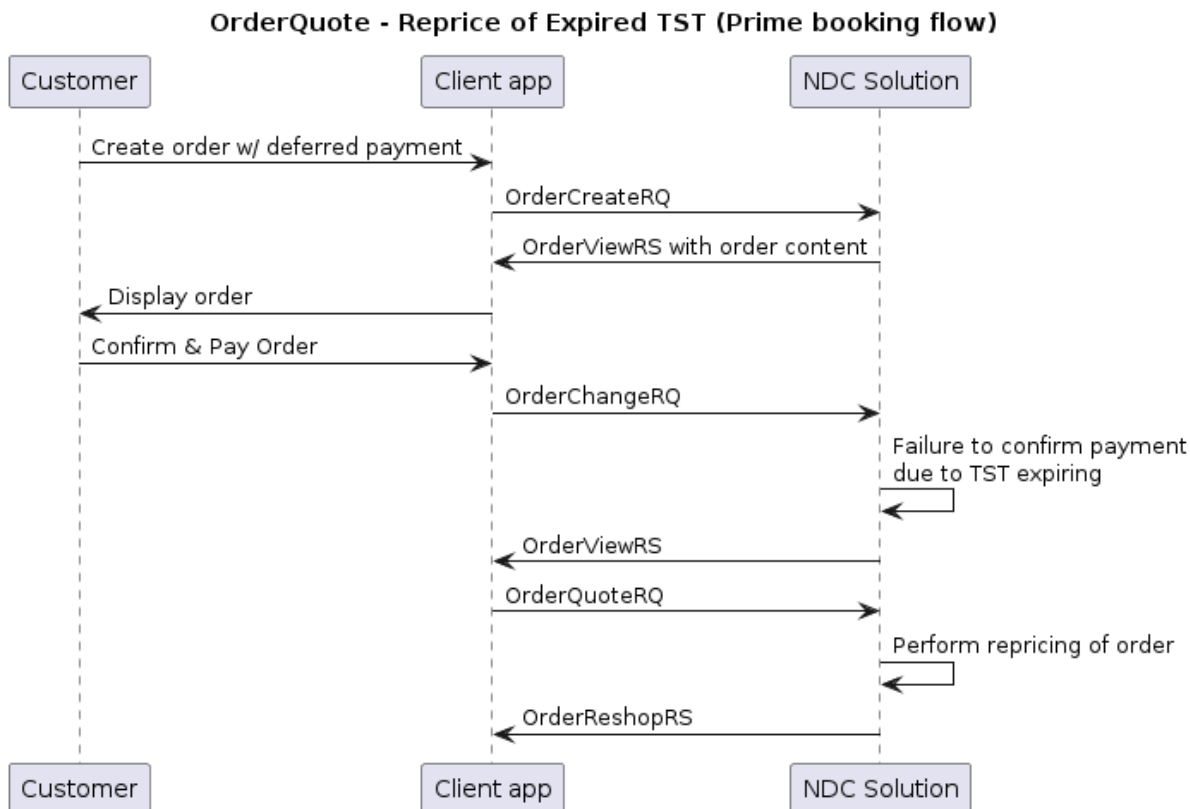

For the repricing of expired Offers there are some limitations and preconditions to take into account.

OrderQuoteRQ is sent to price a previously **expired TST Unpaid** Order.

For unpaid order, it is possible to compute FOP OB fees while repricing by putting a PaymentFunction section containing a FOP in the query.

Pre-conditions

- An order has been created successfully with OrderCreate without being paid (deferred payment)
- The TST for the Order has expired but the Order has not been cancelled yet
- No itinerary or passengers modifications must occur between the Order creation and the Reprice step.

1.5.4. Use case: Compute OB Fees (Unpaid order)

This OrderQuoteRQ is an informative step to calculate/recalculate the form of payment fees, without modifying the Order.

The OrderQuoteRQ is sent to recompute the OB Fees, when:

- An offer is priced without any information regarding OB Fees (for example using CASH) and now the user intends to pay by Credit Card.
- Or initially the user wanted to use a Credit Card and has since changed the Credit Card to use.
- Or if the user wanted to pay by Credit Card and has since changed the FOP to be CASH.

The OB Fees must be recomputed when the Form of Payment (FOP) changes between the priced offer and the actual payment method.

If the request contains the Credit Card (CC) information, such as ".../PaymentMethodCriteria/PaymentCriteriaAddlInfo/PaymentCardCriteriaAddlInfo/IIN_IINN umber" and the payment type is "CC", then this step is going to add/return the OB

Fees information in the response. Otherwise, if there is no CC information and the payment type is not "CC", instead being "CA" or "Cash", then the OB Fees are removed.

Prerequisites

- The priced offer is returned with/without OB fees.
- An order has been created successfully with OrderCreate without being paid (deferred payment mode).
- If the price guaranty time limit is reached the order will be automatically repriced in addition of the computation of OB fees.

Building a query: OrderQuoteRQ

2.1. Implementation

This section describes the implementation of the input message based on the NDC schema version 21.3.

2.1.1. Distribution Chain

The distribution chain data must be provided in any input request of the services described above:

Designation	Repetitions	Status	Location	Comments
Distribution Chain Link	1...N	M	.../DistributionChain/DistributionChainLink	Defines an organization playing a participating role in an instance of a distribution channel. <u>NB: No more than 3 entities can be considered - a single seller / a single distributor / a single carrier.</u>
Ordinal	1	M	/Ordinal	Position of the organization in the distribution chain. This number indicates the order in which the organization participated. Position starts with "1" following ascending order from the seller to the carrier.
Organization Role	1	M	/OrgRole	Role of the organization participating in the distribution chain defined as follow: <ul style="list-style-type: none"> • Seller - end buyer facing. • Distributor - an intermediary. • Carrier - the responsible supplier.
Contact Info	0...1	O	.../DistributionChain/DistributionChainLink/ContactInfo	The electronic or geographic address provided by an organization as the contact channel

(see notes 1 and 2) for Distributor: Unique alphanumeric identifier (3 characters maximum). for Carrier: Airline Code (2 alphanumeric identifier).
Sales Branch	0...1	O	.../DistributionChain/DistributionChainLink/SalesBranch	
Sales Branch ID	1	M	/SalesBranch/SalesBranchID	The industry-wide unique identifier of the sales branch. Commonly, Pseudo City Code may be used or a bilaterally agreed code.

Note (1) : The Seller OrgID can be stored as an AgencyID or a IATA_Number for configuration purpose. the logic is the following :

- If the OrgID is a valid IATA_Number, it is stored as a IATA_Number and as an AgencyID
- OrgID is a TIDS or AgencyID, it is stored as an AgencyID.

Note (2) : AgencyID shall be used when partner has no IATA Number nor TIDS and it must be an 8-digit numeric code to be reported to the revenue accounting.

2.1.6. Currency Override

The **Currency Override** feature allows the requester to modify the default currency set for the Point of Sale (POS). This parameter determines the currency in which responses are displayed.

To apply a currency override throughout the entire transaction flow, the "CurCode" must be included in the input of all relevant requests.

Prerequisites

- The **OrderCreate** request must have been successfully executed to book an order.
- The currency override parameter must be specified in the input.

Limitations

- Only **seat offer items** can be included in the request; no other SSRs are allowed.
- A request can override only **one** currency at a time.
- In case of unpaid order, the payment of the seat must be done in another OrderChange with the payment of all the Order items, and the currency must be the same.

Designation	Repetition	Status	Location	Comments
Currency Parameters	0...N	O	.../Request/ResponseParameters/CurParameter	
Currency	1	M	/CurCode	Currency code to be applied - 3 letters code as per ISO 4217 (Example: USD, EUR, ...)

    <CurCode>USD</CurCode>
  </CurParameter>
</ResponseParameters>
    
```

Currency Override

Note: the currency used for the override must be defined at POS configuration.

Language Option

As part of static file capability, the requester has the possibility to request some airline's information such as fare family benefits, disclaimer, ... in the chosen language. Language(s) to be supported must be properly defined in static file otherwise default is English.

If requester would like to have all responses in the chosen language, the "LangCode" must be added in input of all impacted verbs.

NB: Choice of language is not available in input of OrderChangeRQ due to IATA schema limitation, thus response is always in English.

Designation	Repetition	Status	Location	Comments

LangCode	1	M	/LangCode	The two letters ISO language code (Example: FR, EN,...). By default, the language is English.

3. Receiving a response: OrderReshopRS

Response description

In this response, the price information is displayed at the path :

IATA_OrderReshopRS/Response/ReshopResults/ReshopOffers/RequotedOffer/AddedOfferItem/ReshopPrice/PriceDifferential.

The field at the path /PriceDifferential/DifferentialTypeCode has here the value AddCol which means the scenario is here an additional collection.

Then the price information is divided into three parts:

- /PriceDifferential/DiffPrice represents the difference between the prices prior to the exchange and the new price after the exchange.
- /PriceDifferential/NewPrice represents the price of the new offer.
- /PriceDifferential/OldPrice represents the price of the order prior to the exchange.

In the OldPrice element, the breakdown of the amounts of the previous price is displayed as such: the total BaseAmount, the TotalTaxAmount and the TotalAmount which is the sum of both these amounts.

In both DiffPrice and NewPrice the entire price breakdown is detailed in /DiffPrice/Price and /NewPrice/Price, and the breakdown of the price per PTC. In /DiffPrice/FareDetail and /NewPrice/FareDetail, the breakdown of the price for a specific PTC is detailed. So, for each different PTC, a different FareDetail part is present which is a reference to all the passengers for whom this FareDetail is applied.

The field /DiffPrice/Price/TotalPrice is the sum of /DiffPrice/FareDetail/Price/TotalPrice multiplied by the number of passengers to whom it is applied.

In the DueToAirline element, the sum of /DiffPrice/Price/TotalPrice and the penalties is present. It is the amount the customer will have to pay and it is the value which needs to be put in input of OrderChange.
