## SeatMap

This element is used to describe the configuration of the aircraft.

The aircraft is composed by one or several compartments, i.e. a seats pattern (a given configuration of row/column) applicable to a zone of the aircraft. In Altea Inventory application compartments are known as "engineering zones".

A SeatMap element gathers configuration details about one compartment.

The seatmap reply contains **only information about the cabin matching the requested booking class**. However, as the cabin matching the requested booking class could be defined across several compartments, the seatmap reply could contain several SeatMap elements (all having at least one seat belonging to the targeted cabin).

For each SeatMap element following information are provided:

- Upper Deck indicator (if applicable),
- Compartment (or engineering zone) code,
- Row characteristics: Overwing and Exit,
- Configuration of the compartment: list of columns' name and the range of rows,
- List of facilities along with their position,
- Cabin Code matching the requested booking class,
- List of seat belonging to the compartment with their characteristics.

## Seat construction for multipax

- Pax 1 is eligible to a discount. All seats from row 41 are linked to Seat Profile SEAT1, related to ALaCarteOfferItem PRICE1, containing the discount and for which only PAX1 is eligible.
- Pax2 is not eligible to a discount. Same seats are therefore linked to Seat Profile SEAT2, related to ALaCarteOfferItem PRICE2, without the discount.

LanguageCode	1	O	Errors/LanguageCode	Language code associated with the error response.
TagText	1	O	Errors/TagText	Identifies the tag/XPath which relates to the provided Error.
TypeCode	1	O	Errors/TypeCode	Uses a bilaterally agreed set of values to indicate the error type.

Note: in the current version of SeatAvailabilityRS, the IATA code set for Error/Warning messages is code set number 9845. This code set is the one defined by IATA for seatmap edifact messages

In case the Error/Warning messages is not a IATA one, the code "710" corresponding to "Free text qualifier error" in IATA code set 9321 is used. In this case, the Error/Warning Description will contain the non IATA code and the non IATA description.
