

# Fare benefits in OrderViewRS

## Description

This feature allows to view fare benefits information in OrderViewRS after creating, retrieving, or updating the order. The information is the same as displayed in OfferPriceRS during the order creation process.

## In scope

- Available from NDC API version 21.3.

## Limitations

- In case of disruption, OrderViewRS would not display correct fare benefits if the order was changed outside of NDC and the change affected fare benefits information.
